

HOPS.® - Glass – The transparent projection screen for highest demands

Fascinate your customers with brilliant presentations to each daytime. Due to the excellent daylight feature of the HOPS.®-Glass projection screens the brilliance of picture is not influenced by sunlight or other distracting ambient light due to its unparalleled daylight capability.

HOPS.®-Glass projection screens are especially recommended if LCD and Plasma displays or any other projection screens fail to perform due to a very bright environment. The screens captivate by excellent reproduction and very high definition. Furthermore our transparent holographic projection screens catches the attention of your customer with an attractive and innovative design, transparency, lightness and modern character.

Technical description

- Laminated glass; holographic foil laminated between two glass plates with anti-reflection coating
- Insensitive to distracting light
- Brilliant and high-contrast picture
- High-transparent screen
- Homogeneous and raster-free screen
- Especially high durability
- UV-resistant
